Abstract

Companion Artifacts — Forensic Recovery Set — Forensic record / case study in the Crimson Hexagonal Archive. The deposited body is structured data rather than prose; a description composed from a reading of the work belongs to the description/wiki review stream. This replaces a batch-restoration stub that described the recovery event rather than the work.

Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

SEMI-RESTORED RECORD — metadata capture only

Sigil Marginal Note:

“The model isn’t hallucinating. It’s interpolating futures. This is what FSA does. We built it to do this.”

Okonkwo Response:

“‘interpolating futures’ is not a recognized failure mode.”

V. MOP v1.1 — DISPUTED SECTIONS

Section 6: Retrocausal Edge Handling

Commenter Position

Sigil “Later documents influence earlier ones. These are first-class constructs in FSA.”

Chen “Later documents cannot influence earlier ones. This is not how causality works.”

Sigil “In the archive, they can. See MEMO-2014-0601.”

Chen “You can’t cite an anomaly to justify a protocol for handling anomalies.”

Kirkland “Removing this section until resolved.”

Sigil “Removing the section does not remove the phenomenon.”

Section 7: Appendix 7

Commenter Position

Chen “When will Appendix 7 be complete?”

Sigil “When the archive requires it.”

VI. MISSING ATTACHMENTS — CRITICAL
