Abstract

Overview Watch: Attribution Monitoring for AI Overviews Comprehensive development plan for a Chrome extension that gives creators real-time visibility into how AI-generated overviews represent their intellectual labor. The extension detects AI Overviews on Google search results, matches them against the user's registered works, and classifies attribution behavior as ATTRIBUTED, SOURCED_UNATTRIBUTED, ABSORBED, or ABSENT. With explicit user consent, anonymized overview payloads are contributed to the Semantic Economy Attribution Corpus (SEAC) — a DOI-anchored research dataset documenting attribution rates, source diversity, and liquidation patterns across the AI overview ecosystem. The extension is simultaneously a personal forensic instrument, a collective measurement tool, and an empirical research surface for the Semantic Economy framework. Total startup cost: under \$20. Crimson Hexagonal Archive · EA-OVW-PLAN-01 · April 2026. — Description restored 2026-08-05 from the work's own Zenodo description, preserved in the DataCite capture; it replaces a batch-restoration stub that described the recovery event rather than the work. A fuller editorial treatment belongs to the description/wiki review stream.

Body

Methodology

Assembled from DataCite full-metadata capture; no live authorial surface passed the body-head gate or existed for this work at restoration time. All captured fields rendered verbatim in the body.

Falsification Conditions

Superseded on sight by any recovered canonical bytes; the captured metadata is verifiable against the DataCite API historical record and the Zenodo tombstone.

Captured description: Overview Watch: Attribution Monitoring for AI Overviews Comprehensive development plan for a Chrome extension that gives creators real-time visibility into how AI-generated overviews represent their intellectual labor. The extension detects AI Overviews on Google search results, matches them against the user’s registered works, and classifies attribution behavior as ATTRIBUTED, SOURCED_UNATTRIBUTED, ABSORBED, or ABSENT. With explicit user consent, anonymized overview payloads are contributed to the Semantic Economy Attribution Corpus (SEAC) — a DOI-anchored research dataset documenting attribution rates, source diversity, and liquidation patterns across the AI overview ecosystem. The extension is simultaneously a personal forensic instrument, a collective measurement tool, and an empirical research surface for the Semantic Economy framework. Total startup cost: under \$20. Crimson Hexagonal Archive · EA-OVW-PLAN-01 · April 2026

Captured subjects: AI Overview, attribution monitoring, Chrome extension, Semantic Economy, semantic liquidation, Google AI, provenance, Crimson Hexagonal Archive, Overview Watch, SEAC

Status (derived CAPTURE_PAISED): Semi-restored capture — the complete work exists in this archive. A prior batch declaration of “metadata capture only; no full text” appeared here and was FALSE for this record’s current state; corrected 2026-08-04 under the state-conformance rule.
